

Kochek Big Water Liquid Wetting Agent Standard - 5 gal

RG900-STD05

Details

An exceptional formula focusing on management of water efficiency in turf root zone treatment and the relief of localized dry spot (LDS), especially areas suffering from drought. Designed to treat all types of turf including greens, tees, fairways and lawns. Big Water works best applied as part of a managed application program and can be mixed with most all other turf materials being applied including nutrients, biostimulant, fungicide or insecticides. Using this when applying these materials may enhance their performance since this concentration provides a more uniform and deeper wetting. Made in U.S.A.

Specifications

Manufacturer	Kochek
Container Size	5 gal
