

Leemco Stabilizer - 1.5, Quick Coupler

RGLLS-150

Details

The Leemco Stabilizer securely attaches to the base of the Quick Coupling Valve. Its wide and extended wings packed in the soil prevent the valve from rotating or moving in the vertical plane. Installation is a snap. The Stabilizer slips on the hex portion of the Quick Coupling Valve much the same way as an open end wrench. A single stainless steel bolt securely fastens the stabilizer to the valve body. All quick coupling valves need to be secured by a stabilizer to prevent bodily harm due to slowly disengaging the valve from its base by normal operation and also prevent vandalism.

Specifications

Manufacturer	Leemco
Manufacturer's	LS-150
