

Leemco Coupling - 2" (Not Suited For Repairs)

RGLSB-11C

Details

Leemco fittings mechanically attach to one another with SB-LK links that are supplied and attached to the purchased fitting. As an example, all SBR's and plugs are supplied with SB-LK links that attach to a fitting. There is no need to order separate links or wooden wedges. Leemco Fittings have four lugs on fittings that enable Leemco joint restraints to be attached conveniently for different applications. Vertically located lugs are ideal for Leemco LH-Series joint restraints. Horizontal lugs are convenient for SBR's and plugs. Optional fused epoxy coating is applied to the inside and outside of the fitting which helps protect against high corrosive soil conditions and acidic water created by today's chemical injector and sulfur burner systems.

Specifications

Manufacturer	Leemco
Manufacturer's	SB-11C
Model No
