

Rain Bird Xeri-Bug Emitter - Black

2.0GPH 1/2" Fpt x Barb

RGX63020

Details

Point-Source Low-Flow Emitters for Watering the Root Zones of Plants, Trees, and Container Plants. Ideal for watering the root zones of plants, trees, and container plants. Xeri-Bugs emit water at rates of 0.5, 1.0 and 2.0 gallons-per-hour (GPH) which allows soils to absorb water more completely into the root zones of plants. Xeri-Bugs are an ideal choice for those wishing to conserve water or eliminate excessive run-off. The only emitters with self-piercing barbs, making them the easiest to install using the Xeriman tool. Widest selection of pressure-compensating emitters, with 3 flow rates and 3 inlet options. Most compact and unobtrusive emitters.
